Can I use another port than 7070 for the FNE server

Yes, **this is possible** since FNE software 2022.04.0.0/2019.07.1.0-22144. You can change the port in file

`/etc/systemd/system/advantest-fne-server.service.d/flexnetls-socbu.conf`,

edit

`Environment=PORT=7070.`

> **Note**: However, initial installation must ensure port 7070 is open. The port number can be modified after initial installation is complete.

> **Note**: you need to take care that the new port is also opened in the firewall of the server.
