

# Can I use another port than 7070 for the FNE server

Yes, **this is possible** since FNE software 2022.04.0.0/2019.07.1.0-22144. You can change the port in file

```
/etc/systemd/system/advantest-fne-server.service.d/flexnetls-socbu.conf,
```

edit

```
Environment=PORT=7070.
```

**Note:** However, initial installation must ensure port 7070 is open. The port number can be modified after initial installation is complete.

**Note:** you need to take care that the new port is also opened in the firewall of the server.
