What is SSBXC-SMT-REL-FNX-NL

SSBXC-SMT-REL-FNX-NL belongs to SSBXC-SMT-REL-NL (SmarTest one-time upgrade license). SSBXC-SMT-REL-FNX-NL is not visible on the activation or rehosting page of the license portal, but it is visible on the entitlement overview page and if activated to an FNE server, the appropriate SmarTest_SOC license with vendor string %%SERIALNUMBER:<SN> , PROXY:FNP%% is visible in the FNE server viewer.

If you activate SSBXC-SMT-REL-NL

- **to an FNP license server**, then this product is not needed. You can ignore it.
- **to an FNE license server**, then SSBXC-SMT-REL-FNX-NL will be also activated to the same FNE server with the same system serial number, the same date version and the information proxy. This license enables the proxy to checkout the SmarTest one-time upgrade license correctly.

For the SmarTest license product like SSBXS-SMARTTEST-NL such a hidden associated license for the proxy is not needed.

What is the difference between SSBXC-SMT-REL-NL and SSBXS-SMT-REL-NL

The license products SSBXC-SMT-REL-NL and SSBXS-SMT-REL-NL are SmarTest one-time update products, which allow the use of exactly one specific 3-digit SmarTest release, e.g. 8.5.4.

The difference between the two license products:

- SSBXC-SMT-REL-NL: the "C" stands for "configured item", which means it can be ordered either in a bundle with a tester purchase, or as a standalone order.
- SSBXS-SMT-REL-NL: the "S" stands for "service contract". However, customers with a service contract get the SmarTest SW updates as part of the contract anyway, so this item here is only used in special cases, e.g. low-cost contracts, which is a rather rare use case.
